

# Chubby Frog

*Kaloula pulchra*

## Care Sheet

### Average Size

2 - 3 inches long

### Average Lifespan

6 - 8 years

### Diet

Chubby Frogs are insectivores. They can be fed crickets, mealworms, waxworms, and small roaches.

### Feeding

Chubby Frogs should be fed 2-3 times a week. Dust food with calcium powder every feeding, & a multivitamin once a week.

### Housing

**Habitat** - Chubby Frogs are found throughout Southeast Asia. Chubby Frogs of similar size can be housed together with caution.

**Size** - Chubby Frogs can be kept in a 10-gallon tank for the entirety of their lives. A larger habitat would be recommended for multiple specimens.

**Substrate** - Due to humidity requirements an absorbent substrate is desired. Peat moss, coconut fiber, reptile bark or sphagnum moss are suitable.

**Temperature** - Chubby Frogs need an ambient temperature of 75° to 80° F.

**Humidity** - Chubby Frog humidity should remain high (70%) due to their native tropical climates. This can be maintained using a fogger, hand mister, or misting system.

**Watering** - A large water bowl with clean water should be provided. Always use de-chlorinated or bottled spring water.

**Lighting** - Lighting is not required for Chubby Frogs. For live planted terrariums or aesthetics light may be used. Low strength UVB can be used to promote plant growth and act as an anti-microbial. There is no current proof that this animal requires UVB light, although some keepers prefer to provide UVB.

**Plant and Fish bulbs are not UVB bulbs.**
