

Green Tree Frog

Hyla cinerea

CARE SHEET

www.thetdi.com

Average Size 1.5 - 2 inches long

Average Life Span 2 - 5 years

Diet Green Tree Frogs are carnivores. They can be fed crickets, mealworms, wax worms, small earth worms, fruit flies, and small roaches.

Feeding Green Tree Frogs should be fed 2-3 times a week. Dust food with calcium powder every feeding, & a multivitamin once a week.

Housing Green Tree Frogs can easily be housed together as both babies and adults. Make sure that multiple hiding spots exist in the tank to reduce stress on the frog.

Size - Green Tree Frogs can be kept in a 10 gallon tank for the entirety of their lives.

Substrate - Due to humidity requirements an absorbent substrate is desired. Peat moss, coconut fiber or Tropical Mix available at The Tye-Dyed Iguana are suitable.

Habitat - Green Tree Frogs are found throughout Central America and the South Eastern United States.

Temperature - Green Tree Frogs need an ambient temperature of 78° to 85° F.

Watering - As long as the terrarium is set up semi-aquatic the water portion will suffice for water as long as it is kept clean. Otherwise a large water bowl with clean water should be provided. Always use de-chlorinated water.

Lighting - Lighting is not required for Green Tree Frogs . For live planted terrariums or aesthetics light may be used. Low strength UVB can be used to promote plant growth and act as an anti-microbial. There is no current proof that this animal requires UVB light, although some keepers prefer to provide UVB.

Plant and Fish bulbs are not UVB bulbs.
