

# Red Eye Tree Frog

*Agalychnis callidryas*

## CARE SHEET

[www.thetdi.com](http://www.thetdi.com)

**Average Size** 2 - 3 inches long

**Average Life Span** 3 - 7 years

**Diet** Red Eye Tree Frogs are carnivores. They can be fed crickets, mealworms, wax worms, small earth worms, fruit flies, and small roaches.

**Feeding** Red Eye Tree Frogs should be fed 2-3 times a week. Dust food with calcium powder every feeding, & a multivitamin once a week.

**Housing** Red Eye Tree Frogs can easily be housed together as both babies and adults. Make sure that multiple hiding spots exist in the tank to reduce stress on the frog.

**Size** - Red Eye Tree Frogs can be kept in a 10 gallon tank for the entirety of their lives.

**Substrate** - Due to humidity requirements an absorbent substrate is desired. Peat moss, coconut fiber or Tropical Mix available at The Tye-Dyed Iguana are suitable.

**Habitat** - Red Eye Tree Frogs are found from Southern Mexico to Eastern Panama.

**Temperature** - Red Eye Tree Frogs need an ambient temperature of 75° to 80° F.

**Watering** - As long as the terrarium is set up semi-aquatic the water portion will suffice for water as long as it is kept clean. Otherwise a large water bowl with clean water should be provided. Always use de-chlorinated water.

**Lighting** - Lighting is not required for Red Eye Tree Frogs . For live planted terrariums or aesthetics light may be used. Low strength UVB can be used to promote plant growth and act as an anti-microbial. There is no current proof that this animal requires UVB light, although some keepers prefer to provide UVB.

**Plant and Fish bulbs are not UVB bulbs.**
