

White's Tree Frog

Litoria caerulea

CARE SHEET

www.thetdi.com

Average Size 4 - 6 inches long **Average Life Span** 10 - 20 years

Diet White's Tree Frogs are carnivores. They can be fed crickets, mealworms, wax worms, earth worms, roaches, and occasionally small rodents such as pinkie mice.

Feeding White's Tree Frogs should be fed 2-3 times a week. Dust food with calcium powder every feeding, & a multivitamin once a week.

Housing White's Tree frogs can easily be housed together as both babies and adults. Make sure that multiple hiding spots exist in the tank to reduce stress on the frog.

Size - Baby White's Tree Frogs can be kept in a 10 gallon tank. White's Tree Frogs are extremely active frogs at night and require substantial amounts of space for adults. An adult tree frog requires at least a 20 gallon tank.

Substrate - Due to humidity requirements an absorbent substrate is desired. Peat moss, coconut fiber or Tropical Mix available at The Tye-Dyed Iguana are suitable.

Habitat - White's Tree Frogs are found throughout Northeast Australia, New Guinea, Indonesia.

Temperature - White's Tree Frogs need an ambient temperature of 75° to 85° F.

Watering - As long as the terrarium is set up semi-aquatic the water portion will suffice for water as long as it is kept clean. Otherwise a large water bowl with clean water should be provided. Always use de-chlorinated water.

Lighting - Lighting is not required for White's Tree Frogs. For live planted terrariums or aesthetics light may be used. Low strength UVB can be used to promote plant growth and act as an anti-microbial. There is no current proof that this animal requires UVB light, although some keepers prefer to provide UVB.

Plant and Fish bulbs are not UVB bulbs.
