AVED IN	
	Asian Forest Scorpion Heterometrus Sp.
www.thetdi.cor	Transformation Care Sheet
Average Size	3-5 inches long
Average Lifespan	5 years
CAUTION	All scorpion species are capable of pinching and delivering a potent sting. It is NOT recommended to handle these species. Use forceps or tongs for general cage maintenance.
Diet	Scorpions eat a variety of live insects including crickets, mealworms, superworms, waxworms, hornworms, and dubia roaches.
Feeding	Feed your Scorpion appropriately sized food items once every week. Number of prey items will vary depending on each scorpion and number of specimens in the enclosure. Never feed your scorpion during a molt.
Housing	Habitat - Being from Tropical/Neo-Tropical environments high humidity (70-80%) is recommended. Provide a cluttered habitat with plenty of hiding places, leaf litter, and cork bark. Live plants and a glass or plastic lid may help maintain humidity.
	Size - Most adult specimens will require a 10-gallon tank or larger. Small and immature specimens can be kept in smaller enclosures such as Zilla's Micro Habitats. Tank size will vary depending on the size of the Scorpion as well as number of specimens in the enclosure. Scorpions are communal only when housed with animals of the same size. Cannibalism is possible when small scorpions are housed with larger adults. Secure tops are recommended as scorpions can climb silicone and decorations to escape.
	Substrate - Acceptable substrates include jungle mix, repti-soil, Fir bark, or eco earth. Moss can be added to substrate for increased humidity. Scorpions can burrow, as a result, make sure substrate depth is at least 4 - 6 inches.
	Temperature - Temperatures between 72-85°F are perfect for your Scorpion. Temperatures below 65°F can be problematic and should be corrected using low wattage lighting or heating pads.
	Watering - Always provide a bowl of fresh drinking water. Size the bowl appropriately to the animal. The cage can be misted manually or with an automated fogger/mister to maintain proper humidity levels.
MË H	Lighting - Scorpions do best when provided with a natural 12-hour photoperiod. Fluorescent or LED lighting are excellent options to light the terrarium during the day and for plant growth. Red bulbs or LED blacklight bulbs are great options for nighttime viewing.
न्नि Follow us	Molting - Feeding should be put off for at least a week after a molt as the mandibles and exoskeleton will still be soft and damageable by prey.
