

Red Eye Tree Frog

Agalychnis callidryas

Care Sheet

Average Size

2 - 3 inches long

Average Lifespan

3 - 7 years

Diet

Red Eye Tree Frogs are carnivores. They can be fed crickets, mealworms, wax worms, small earth worms, fruit flies, and small roaches.

Feeding

Red Eye Tree Frogs should be fed 2-3 times a week. Dust food with calcium powder every feeding, & a multivitamin once a week.

Housing

Habitat - Red Eye Tree Frogs are found from Southern Mexico to Eastern Panama in the canopy of tropical rainforests. Red Eye Tree Frogs can easily be housed together with similar sized tank mates. Make sure that multiple hiding spots exist in the tank to reduce stress on the frog.

Size - Red Eye Tree Frogs can be kept in a 10-gallon tank for the entirety of their lives.

Substrate - Due to humidity requirements an absorbent substrate is desired. Peat moss, coconut fiber, reptile bark or sphagnum moss are suitable.

Temperature - Red Eye Tree Frogs need an ambient temperature of 75° to 84° F.

Humidity - Red Eye Tree Frog humidity should remain high (60-90%) due to their native tropical climates. This can be maintained using a fogger, hand mister, or misting system.

Watering - If the terrarium is set up semi-aquatic the water portion will suffice for water if it is kept clean. Otherwise a large water bowl with clean water should be provided. Always use de-chlorinated or bottled spring water.

Lighting - Lighting is not required for Red Eye Tree Frogs. For live planted terrariums or aesthetics light may be used. Low strength UVB can be used to promote plant growth and act as an anti-microbial. There is no current proof that this animal requires UVB light, although some keepers prefer to provide UVB.

Plant and Fish bulbs are not UVB bulbs.
